## <u>TITLE OF INVENTION</u> <u>Process for Repairing Coated Substrate Surfaces</u>

## <u>ABSTRACT</u>

The invention relates to a process for repairing coated substrate surfaces comprising the following successive steps:

- a) optionally, preparing a blemished area to be repaired,
- b) providing at least one backing film coated on one side with an uncured or at least only partially cured coating layer of a thermally curable coating composition,
- c) applying the at least one backing film with its coated side onto the blemished area to be repaired,
- d) supplying thermal energy to the coating applied in this manner onto the blemished area to be repaired and
- e) removing the at least one backing film, wherein the supply of thermal energy onto the coating proceeds through the at least one backing film, and/or after removal of the at least one backing film.
